Ooty

Program report submitted by  
DR S Ponnusankar  
Professor & Head, Dept. of Pharmacy Practice  
Program Co-ordinator

One Day workshop on ICT enabled teaching methods was organized by the Dept. of Pharmacy Practice on 2<sup>nd</sup> March 2019. About 45 participants participated in the program. This seminar is aimed to develop the skills of the pharmacy teachers in ICT enabled teaching methods and apply them on their daily practice.

It is a challenge for the teachers to educate the present generation since our education system hasn't changed yet. We still have the old tradition methods in teaching our children. Is it right time to bring a change over? If not, as teachers shall we upgrade ourselves to their expectations? Answers to these questions may be difficult since it depends on the environment you work, the acceptance from the workplace to switch over to a new methodology, the cost involved to bring in a change and many more.

But as an individual we can bring in some changes that help both the teachers and students to achieve the goal by introducing the technology! The presentation is prepared keeping in mind that to achieve the maximum possible goal regarding the education of the present generations.

The presentation is divided in to two major categories:

- Free Tools for creating the multimedia lessons
- How to use them – Hands on training

The participants were encouraged to use all the tools and prepare the presentation and the hands on training was also provided.
